

Golden Tiger Telecom Pvt. Ltd.
Pune's local ISP

Golden Tiger Telecom Pvt. Ltd (**GTTPL**) is a franchisee of Compulink India Pvt. Ltd., a licenced ISP from Department Of Telecom, India and is one of Pune's leading internet and telephone service providers.

For the last 4 years **GTTPL** has been providing telephony and internet services to Mundwa, Kalyani Nagar, Koregaon Park, Viman Nagar, Wadgaon Sheri Aundh and Baner and is busy adding more areas under its belt every month.

We understand that **your premises** being one of the most exclusive buildings in Pune, the needs of the residents are a bit out of the ordinary and therefore the connectivity has been tailored to meet your discerning needs.

What's more with a Network Operating Centre at the base of the building in the premises itself, interactive response to your help query is just a moment away.

Some of the services proposed to be made available to you at **your premises** are:

Landline Telephony (Normal Telephone line):

Every Apartment at **your premises** will come with a pre-allocated Pune local landline telephone number. This means that all your clients need to do is call us 24 hours before they move in to have it active and waiting for them.

The land lines are crystal clear since the exchange in this case is at the base of the building and not more than a kilometer away as is normally the case. This also means that your clients can get more land lines within minutes on a temporary basis for all those unforeseen times.

Some of the other benefits include fractional month billing such as if the apartment is on rental and is being vacated on lets say 20th of a month, all they need to do is inform us 3 days earlier and their bill for that month would be prepared and be ready for you before their tenant vacates.

Calls to the local exchange are FREE for them so as in existing in most cases the local suppliers are covered under this exchange so calls to their local stores need not be billed anymore.

If they wish to run a budgeted system, they can also avail of our prepaid facility thereby meaning no budgetary overruns.

Salient features of our telephone network:

- Hunting facility available for 2 or more lines
- Interim billing available
- Local calls free
- Prices same as BSNL

International Incoming Phone Numbers:

We understand that most residents of **your premises** may have International communication needs. We understand that they need to be able to give the convenience to their business associates and even their family members to contact them at a number in their local country.

With the advent of technology, they as an International entity no longer need to have a Pune number for people to call them on. They can now choose your incoming phone number from a large number of countries such as UK, USA, Germany, etc. If people call that number from anywhere in the world, their phone body in Pune will ring.*

**separate phone line from Pune local line.*

Cheap outgoing International calls:

We at **GTTPL** know that your clients communication is not just one sided with incoming calls. Therefore they can now make their outgoing International calls from their phone at **your premises** at a fraction of the cost that they would normally pay. For example a call to Australia will cost you Rs. 5.00/- per minute from **your premises**, whereas from other lines, it will cost maybe double and more.

Internet Bandwidth:

The residence at **your premises** would be prewired and ready for internet bandwidth. There would also be wireless connectivity if the complex has more than 200 households. The 64 Kbps packs would be given FREE to the residents if the complex is more than 200 households. And paid schemes available are from 128 Kbps to a whopping 4 Mbps accounts all at a rate favorably comparable to the market.

These accounts have been designed with a lower than normal sharing ratio than used in India for broadband connections, keeping in mind the clientele profile of **your premises** and their possible surfing needs. The protocols chosen are designed to be connect able by almost all commonly available devices including most routers, PS2 & Xbox gaming machines, etc.

Being a member of the **GTTPL** family allows your clients access to a multitude of value add facilities like multiplayer LAN gaming, etc.
